## DETAILED ACTION

### *Continued Examination Under 37 CFR 1.114*

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 11/02/05 has been entered.

### *Claim Rejections - 35 USC § 102*

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 38-43 are rejected under 35 U.S.C. 102(b) as being anticipated by Anderson (US 3,085,195).

With respect to claims 38 and 41, Anderson discloses a method of multinuclear magnetic resonance spectroscopy and imaging comprising the steps of: generating an exciter signal (by probe #16 in Figure 3); synthesizing a plurality of synthesized signals appropriate to the atomic species to be studied (Figure 3, #21); mixing the exciter signal with the plurality of synthesized signals, creating a plurality of generated signal (Column 6, lines 14-32); exciting a plurality of atoms having different atomic weights with the plurality of generated signals; receiving a

plurality of experimental signals within different Larmor frequency ranges from atoms excited by the plurality of generated signals (Columns 2-3, lines 12-23 and 22-42 respectively).

4. With respect to claims 39 and 42, Anderson discloses the step of mixing the received experimental signals with a plurality of corresponding synthesized signals, thereby creating a plurality of final signals (Column 6, lines 14-32).

5. With respect to claims 40 and 43, Anderson discloses the step of exciting atoms with the exciter signal; and receiving an exciter experimental signal (Column 3, lines 22-43).

*Claim Rejections - 35 USC § 103*

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 44-48 are rejected under 35 U.S.C. 103(a) as being unpatentable over Anderson (US 3,085,195) in view of Keren (US 5,160,891 A).

With respect to claims 44-48, Anderson discloses the claimed invention as stated above in paragraph 3 except for the step of digitizing the final signals by separated devices. However, Keren discloses the step of digitizing the final signals by separated devices (Figure 1, #42-#46). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to digitizing the signals by separated devices as taught by Keren with Anderson's method of multinuclear magnetic resonance spectroscopy and imaging for the purpose of sending a digital signal from the processor to the digital display means.
